ekey
YOUR FINGER. YOUR KEY.

dLine
Fingerprint Scanner

The finger as a key
Make sure you can unlock at any time. Keys, cards or codes can be lost, misplaced or forgotten – the finger is always on hand!

Highest security
Finally, only authorized persons can open the door. The ekey dLine fingerprint scanner is also 1,000 times more secure than the 4-digit numerical code of an ATM card.

Remote opening
No more waiting to let the handyman into the house. In an emergency, you can unlock the door from anywhere – whether you're in the office, on the road, or on vacation!

Push notifications
No more uncertainty! You will receive an automatically generated message on your smartphone as soon as your loved ones come home.

Virtual assistant
Connect your ekey dLine fingerprint with Amazon Alexa and open the door simply by voice command.

Flexibly expandable system
With the ekey dLine, you do not have to decide in advance what scope your access system should have. It can be subsequently extended with functions, users and devices.

Personalized time slots
You can restrict access authorizations to specific days and times. In this way, you determine who is allowed to enter your home and when.

22.3

Further advantages

Simple operation
Intuitive opening of the front door with your finger

Smart technology
Europe's No. 1 in fingerprint access solutions

High weather resistance
Designed and certified for outdoor use

Practical app management
Always have everything under control with an app

New design
Modern and compact design of the fingerprint scanner

Convenient access
Open the door without a key or other tools

The ekey dLine fingerprint scanner learns with every use, recognizes the growth of children's fingers and changes in user habits as well as minor injuries.

The new ekey dLine fingerprint can be installed in the door leaf or in the door handle. It scores with its simple and elegant look and blends harmoniously into the door design.

The ekey bionyx app

The ekey bionyx app is your control center for building access. This is where you assign permissions to your family, friends and service providers and assign different roles. Time slots can be defined that restrict access to certain days of the week and times of day for specific individuals. The access log shows you the activities of your ekey dLine fingerprint scanner over the last 12 months.

What's more, the ekey bionyx app is the trigger for smart functions; this allows you to open the door remotely – a practical every-day helper! Push notifications to your smartphone let you know that your loved ones have arrived home safely. The connection to the virtual assistant provides additional convenience at the front door.

But ekey offers much more: You do not have to decide in advance what scope your access system should have. Functions and devices can be added to the ekey dLine at a later date. In the ekey bionyx app, you always have an overview of all connected devices, access points, functions and users and can benefit from the advantages of shared administration.

Features of the ekey bionyx app

User administration
Easy to enable and disable all users

Convenient remote administration
Assign access authorizations even when out and about

Ongoing firmware updates
Always be at the cutting edge of technology

Clear access protocol
View all accesses for the last 12 months

Push notifications
Message to the smartphone when opening the door

Remote opening
No more waiting to let the handyman into the house
